Please read this disclaimer carefully.

If you have any question about your possible actions, please consult your legal, financial, tax or other professional advisers.

The information presented in this white paper is only descriptive without any contractual relationship elements. The contents of this white paper are neither binding to the Complete New Commerce Chain foundation nor the "CNC- Chain", which may change with the continuous development of the Complete New Commerce Chain platform and the CNC-Chain protocol. Neither does this white paper constitute any recommendation in investment, legal, tax, regulatory, financial, accounting or other aspects , nor does it provide a sole basis for the transaction assessment of the purchase of Complete New Commerce Coin or the encrypted digital currency (hereinafter referred to as "Token") issued by the entity. Before buying Token, potential buyers should consult their legal, investment, tax, accounting or other advisers to determine the potential benefits, burdens or other consequences of such transactions.

The contents in this white paper shall neither be deemed as a prospectus or an investment invitation of any kind, nor be related with the offering or solicitation to purchase any securities in any jurisdiction. If the laws and regulations of any jurisdiction prohibit or restrict the transactions in any way involving or using Token, this white paper is not prepared in accordance with such laws and regulations and is not subject to the laws and regulations of the jurisdiction. Several statements, estimates, and financial information contained in this white paper are forward-looking statements or information. Such forward-looking statements or information involve known or unknown risks and uncertainties that may result in significant differences between the actual event or result and the estimate or result implied or indicated in such forward-looking statements or information. Token holders are neither allowed to provide or distribute tokens to citizens, natural persons, legal persons and partners

who have habitual residence, place and company in the following countries/regions, nor can Token be resold to such persons or transferred by other means:

1. China, the United States (including U.S. States and the District of Columbia), Puerto Rico, the U.S. Virgin Islands or any other territory of the United States.

2. Countries or regions where Token is prohibited or restricted in any way by applicable laws and regulations. If such restricted person buys Token, it is illegal, unauthorized and deceptive, and the one should bear any negative consequence alone.

The company will not exert any action that is regulated in China and South Korea or any place with restrictive regulations which require the use and transactions of Token should be complied with law and regulation or registered and licensed by the government. Each Token buyer should keep in mind that this white paper provides them with the condition that they can legally present this document according to the law of the purchaser's jurisdiction. The responsibility of potential Token buyers is to determine whether they can legally buy the Token in the jurisdiction where the Token is purchased, and whether they can then resell the Token to other buyers in any particular jurisdiction.

摘要 SUMMARY

After years of development, the asset rights and interests has developed from the propertilization of asset rights and interests and the securitization of asset rights and interests to the digitization of asset rights and interests. With the gradual maturity of the blockchain technology, the asset rights and interests in the future will be achieved through the application of blockchain innovation technology, resulting conveniently completion of the digitalization of asset rights and interests, so as to make the circulation of assets more efficient and credible. The CNC-Chain, as the alliance Chain of digital assets equity released by the new economic and commerce campaign organization, aims to create a new, authentic and credible asset equity ecosystem. An equity community platform for digital assets based on blockchain technology is used to integrate enterprise resources in the future alliance.

In the CNC-Chain ecology, the Token issued under the ethereum ERC-20 agreement is called "CNC-Coin", which is a new crypto digital currency system. CNC-Coin anchors the total value of assets and equity of all enterprises in the CNC-Chain alliance. The purpose of its creation is to digitize the asset rights and interests of CNC-Chain alliance enterprise, to carry out asset rights and interests swap with other alliance enterprises in the community, and to facilitate its usage in business scenarios for the community alliance enterprises. CNC-Coin will facilitate the circulation of asset rights and interests among alliance enterprises. It will serve as the circulation certificate to realize value exchange between community alliance enterprises and community members, so that multiple assets can achieve win-win results through the digitalization of asset rights and interests.

1. As an alliance platform, CNC-Chain is used to acquire the asset rights and interests of alliance enterprises, which will be operated by the foundation voted by all Token holders.
2. When using Token, enterprises on the alliance Chain of CNC-Chain regard Token as "Token", instead of "payment currency". For example, in the scene of

commodity exchange, users use "cash + Token" to get the right of return when they recharge their Token, the more Token they use, the more ratio of return they can get. In scenarios such as eco-farm, users can get a superior option or discount when they pay for a farm land or a service by using a mixture of cash and tokens.

As a digital community of global asset rights and interests, CNC-Chain will continue to inject high-quality assets in accordance with the principle of openness, integrity and transparency and constantly seek for more participants with consensus. The high liquidity and harmony brought by digitalization have made the ecological value continuously enhanced.

Currently, enterprises joining in the ecological alliance of CNC-Chain are as follows: Zhongmo Commodity Futures Exchange, Yuanchao general trading LLc, Washi Technology, Guoang Investment, China Council for International Investment Promotion, Jixianlin Foundation, the New Asia Pacific Group, the Sino-EU Communication Association, Morocco government, the Association of Chinese Minority 's Ancient Cultural Relics, South Korean Buddhist Group, Korean Institute of Ancient Culture, the Financial Development Research Center of China, Huayu Kawei Asset Management co., LTD and etc.

CNC-Chain has set up a foundation in Singapore, which acts as an executor of managing community asset rights and interests, adopting the mechanisms of decentralization, non-tampering, point-to-point, data traceability and etc., and using the foundation-node voting mechanism to publish the accounting book to the community. CNC-Chain will be the leading community in this field.

1 资产权益化

Asset Rights
and Interests

<全球资产权益数字化第一链>

1.1 The Summary of Assets Rights and Interests

After years of development, the asset rights and interests has developed from the propertilization of asset rights and interests and the securitization of asset rights and interests to the digitization of asset rights and interests. With the gradual maturity of the blockchain technology, the asset rights and interests in the future will be achieved through the application of blockchain innovation technology, resulting conveniently completion of the digitalization of asset rights and interests, so as to make the circulation of assets more efficient and credible.

- (1) The propertilization of asset rights and interests is the process of transforming articles into asset rights and interests. The articles themselves, such as houses, were originally built by humans for living. Yet with the development of society, "land deeds" and "house deeds" appear to prove the ownership of assets and serve as transaction documents. This process is turning assets into property right.
- (2) The securitization of asset rights and interests refers to the process of turning asset rights and interests into securities, which is not the narrow definition made by investment banking - ABS asset-backed securities, but a generalized process of turning assets into stocks, bonds, usufruct. In this process, assets can be moderately segmented, being exchanged in the special places stipulated by the state. In recent years, these assets have received the good liquidity thanks to the Internet.
- (3) With the progress and application of blockchain technology, the digitization of asset rights and interests/the process of asset on-chain is to complete the registration, transaction, settlement and other links of assets on the blockchain, and the settlement shall be carried out by the compliance institution according to the records on the chain, so as to make transactions decentralized without relying on platform, and to facilitate the circulation of asset rights and interests.

The three stages of asset rights and interests represent the continuous in-depth exploration of the forms and circulation of asset rights and interests in the three eras. Through development, more assets will choose digitalization as the manifestation and circulation forms of rights and interests in the future.

The propertilization of asset rights and interests	The securitization of asset rights and interests	The digitization of assets rights and interests
Land deeds House deeds	Stock Bonds Usufruct	Data on-chain Blockchain The use of rights The share of rights

1.2 The Elements of Digitization of Asset Rights and Interests

1. Asset is the core

First of all, it depends on a certain type of specific assets no matter in the propertilization, securitization or digitization of asset rights and interests. Secondly, the form of the asset itself depends on the type of the assets and the specific needs of the asset owner. The asset form includes currency asset, commodity asset, property right asset, creditor's right asset, equity asset and other derivative asset.

2. Confirmation is the guarantee

The propertilization, securitization and digitization of asset rights and interests are all subject to confirmation. The ownership of blockchain of assets is based on propertilization and securitization. Due to the complex physical world problems involved in the confirmation of rights, it cannot be replaced by the work on the blockchain alone, which is embodied in two aspects: (1) Confirmation is needed to

ensure the corresponding relationship between the assets on the chain and the assets out of the chain; (2) At the operational and legal level, it is necessary to ensure that the assets and transactions on the blockchain are updated synchronously with their information out of the blockchain.

3. Circulation is the value

Asset transactions on the blockchain can remove unnecessary transaction intermediaries and improve assets liquidity. Assets with high liquidity in the trading market will get a higher valuation, because the market will require the risk premium compensation due to the low liquidity. Higher valuations make refinancing more efficient and give it an edge when it comes to asset consolidation.

The digitization of the asset blockchain will make the asset have extremely high liquidity. For example, the first mature application of the blockchain, bitcoin, can appear in the market with an epoch-making status, in addition to its technical connotation, more importantly, thanks to the value circulation problem perfectly being solved.

Asset is the core	Confirmation is the guarantee	Circulation is the value
Currency asset Commodity asset Property right asset Creditor's right asset Equity asset Other derivative asset	The propertilization of assets The securitization of asset rights and interests The digitization of assets rights and interests All need to be confirmed	Assets with high liquidity get higher valuation

1.3 The Practice of Digitization of Asset Rights and Interests

(1) The private equity is on-chain, such as the NASDAQ LINQ system. Nasdaq, the U.S stock exchange, began exploring asset-on-chain practices as early as 2015. Although NASDAQ itself is still a platform in the stage of securitization, the LINQ system it launched in the private equity market is a platform based on blockchain technology. To some extent, we can consider it an important transition from the stage of securitization to the stage of blockchainization. The main function of this platform is equity management and transaction. Through this system, enterprises in LINQ can register their shares on the blockchain, and investment institutions in LINQ can easily find the financing needs of enterprises. The platform also has an online signing function, but the signing is not valid to the outside, and it still needs to be registered by government departments to produce industrial and commercial validity.

(2) The shares of listed companies are on-chain, such as the OVERSTOCK system. OVERSTOCK, a well-known American listed company, has developed a securities trading platform called T0. T0 means T+0 settlement, a transcendent improvement on the existing T+3 stock settlement in the United States. In addition to the settlement process, OVERSTOCK goes a step further than LINQ, that is, from the private placement stage to the public offering stage (through the acquisition of an ATS company, approved by SEC, the U.S securities regulator), the shares of OVERSTOCK can be traded on both NASDAQ and its own OVERSTOCK blockchain platform.

(3) Various financial assets are on the chain, such as bytom. Bytom is a kind of block chain interaction protocol of diversified digital assets. Different types of assets (earnings right, non-listed equity right, creditor's right, digital currency, etc.) running on bytom can be exchanged, making bets and conducting complex interactive operations based on smart contracts through this protocol. The bytom has established cooperative relations with some local financial asset exchanges, local equity exchanges and local commodity trading centers, which not only endows them with technical skills, but also exports the assets on the chain to the exchanges according to

CNC-Chain Community of the Digitalization of Global Asset Rights and Interests

the varieties and demands, so that they can truly gain profits on the chain and achieve win-win results.

Hitherto, the exploration of the digitalization of asset rights and interests has not stopped. In this context, CNC-Chain will create a community for global digitalization of asset rights and interests.

The digitalization of asset rights and interests.		
The private equity is on-chain	The shares of listed companies are on-chain	Various financial assets are on the chain

2 新贸链

CNC-Chain

<全球资产权益数字化第一链>

2.1 Introduction of CNC-Chain

Complete New Commerce Chain (hereinafter referred to as "CNC -Chain") is a digital community platform for asset rights and interests driven by blockchain technology. It aims to build a win-win economy by integrating the asset rights and interests of all alliance participants in the community. As an alliance chain of digital asset rights and interests, CNC-Chain aims to create a new and authentic asset rights and interests ecosystem.

The alliance of CNCC digitalization of asset rights and interests.			
CNCC Alliance Enterprise 1	CNCC Alliance Enterprise 2	CNCC Alliance Enterprise 3	CNCC Alliance Enterprise N

In CNC-Chain ecology, based on CNC-Chain, Token is issued as " CNC-Coin ", which is a new crypto digital currency system. CNC-Coin anchors the total value of assets and equity of all alliance enterprises in the new commerce chain. The purpose of its creation is to digitize the asset rights and interests of CNC-Chain alliance enterprise, to carry out asset rights and interests swap with other alliance enterprises in the community, and to facilitate its usage in business scenarios for the community alliance enterprises. Each member of the ecology digitizes and puts their assets on the CNC-Chain ecology after passing the rigorous evaluation process by the foundation and the independent third party. CNC-Coin will facilitate the circulation of asset rights and interests among alliance enterprises. It will serve as the circulation certificate to realize value exchange among community alliance enterprises and community members, so that multiple assets can achieve win-win results through the digitalization of asset rights and interests.

The foundation		
The community	CNC-Chain	The third-party evaluation agencies
The alliance enterprises		

CNC-Chain will set up a foundation overseas, which will serve as the core institution of asset rights and interests operation, adopting the mechanisms of decentralization, non-tampering, point-to-point, data traceability and etc., and using the foundation node voting mechanism to publish the accounting book to the community.

Currently, enterprises joining in the ecological alliance of CNC-Chain are as follows: Zhongmo Commodity Futures Exchange, Yuanchao general trading LLc, Washi Technology, Guoang Investment, China Council for International Investment Promotion, Jixianlin Foundation, the New Asia Pacific Group, the Sino-EU Communication Association, Morocco government, the Association of Chinese Minority ‘s Ancient Cultural Relics, South Korean Buddhist Group, Korean Institute of Ancient Culture, the Financial Development Research Center of China, Huayu Kawei Asset Management co., LTD and etc.

2.2 The Value of CNC-Chain

As a community of digitalization of global asset rights and interests, CNC-Chain will continue to inject quality assets in accordance with the principle of openness, integrity and transparency and constantly seek more consensus. The high liquidity and harmony brought by digitalization have made the ecological value continuously enhanced.

2.3 The Business Logic of CNC-Chain

CNC-Chain will build a community that reflects the overall value of digitized asset rights and interests. The goal is to bring corporate asset rights and interests on the alliance chain into the cryptocurrency market. To achieve this goal, the community will choose an experienced team through voting to carry out asset discovery, evaluation and digital execution. The injection process of high-quality assets will transfer value to CNC-Chain.

Alliance enterprise	The foundation	Non-alliance enterprise		
Alliance enterprise		Assess (pass/fail)	CNC-Chain (asset rights and interests swap)	CNC-Coin
Alliance enterprise	The third-party agency			

As a diversified portfolio, our asset equity portfolio will extend to all levels of the market. The whole ecological value is shared by community participants through the transfer from CNC-Coin to the asset rights and interests on chain.

2.3.1 Industry Collaboration of CNC-Chain

By collaborating the enterprises on chain and relying on its cluster basis and comparative advantages, CNC-Chain establish the mechanism of the coordinated development for the enterprises on chain and co-create the high-quality industry collaboration on chain. CNC-Chain expands the scale of the assets to facilitate

enterprises joining the alliance chain in the future to obtain more dividends of assets, by digging out valuable enterprises constantly and orderly promoting CNC-Chain's efficiency in the trans-regional, cross-industry fields, and the ability of sustainable development as well as by establishing and improving the ecological linkage mechanism of the alliance chain and building up ecological barrier together.

2.3.2 The Effect of Co-creation of CNC-Chain

Based on the collection of trans-platform and cross-industry enterprises on chain, yet various enterprises on chain have their own flow and valuable asset rights and interests and hence integration cannot be fully realized, CNC-Chain, as a platform for alliance chain, is obliged to break down the barriers and co-integrate the abundant resources, enabling the resources to circulate efficiently within trans-platform and cross-industry, so as to create the effect of high-speed circulation and enhance the value of the asset rights and interests on chain.

2.3.3 The Incentive Mechanism of CNC-Chain

In order to get more enterprises to join in the alliance chain, CNC-Chain has established an incentive mechanism of "unearthing new alliance members", enabling participants to actively explore potential alliance users both inside and outside the ecology. Multi-dimensional contributions such as project attention, participation, dissemination, equity exchange and on-chain will be transformed into contributions to the whole ecology.

3 CNCC Token

<全球资产权益数字化第一链>

In traditional alliance, enterprise group, capital system and other systems, the core problem is that for the ecosystem, it is difficult to make all the participants of the alliance enjoy equal and balanced benefits through a reasonable cross-shareholding scheme. CNCC solves the problem of alliance equity by injecting assets into the overall ecology and transferring values to Token.

CNC-Coin's economic model is based on alliance blockchain. In the ecosystem, Token is the Complete New Commerce Coin, or CNCC, to be issued based on the ethereum ERC-20 agreement. CNCC is a new cryptocurrency system that anchors the sum of the asset rights and interests value of all CNC-Chain alliance enterprises. The purpose of its creation is to digitize the asset rights and interests of CNC-Chain alliance enterprise, to carry out asset rights and interests swap with other alliance enterprises in the community, and to facilitate its usage in business scenarios for the community alliance enterprises. CNC-Coin will facilitate the circulation of assets and interests among alliance enterprises. It will serve as the circulation certificate to realize value exchange between community alliance enterprises and community members, so that multiple assets can achieve win-win results through the digitalization of assets.

3.1 CNC-Coin

CNCC alliance is jointly initiated by the participants of the CNC-Chain ecology. In the alliance, the Token of CNC-Coin will be used for:

1. Acquiring asset rights and interests of alliance members;
2. Payment to the participant providing the service;
3. Holders will also use Token to transfer their rights and interests;
4. As an incentive mechanism, CNCC rewards operators involved in the development and maintenance of the alliance.

3.2 The Value of CNC-Coin

The members of the CNC-Chain alliance are organized as a collective economy.

1. Members of each alliance will “tokenize” part of their asset rights and interests as the flow credential of this kind of equity, and this part will be injected to make Token have property asset attribute;
2. By developing new community participants (enterprises or influential individuals) to continuously inject assets, Token’s value will continue to increase. At the same time, Token can be used to add value to community units which will reversely benefit the participants and enhance the value of the whole community. The asset rights and interests shall be owned by all the holders of CNCC.

3.3 The Anchor of CNC-Coin

CNCC Token anchors the sum of asset rights and interests of all alliance enterprises in the new commerce chain.

As the value basis of the entire ecology of CNC-Chain, it provides strong support for Token circulation within the ecology or in the secondary market.

3.4 The Scenarios of CNC-Coin’s Application

1. As an alliance platform, CNC-Chain uses CNC-Coin to acquire asset rights and interests, which will be operated by the foundation that all Token holders vote for;
2. When using Token, enterprises on the alliance Chain of CNC-Chain regard Token as "Token", instead of "payment currency". For example, in the scene of commodity exchange, users use "cash + Token" to get the right of return when they recharge their Token, the more Token they use, the more ratio of return they can get. In scenarios such as eco-farm, users can get a superior option or discount when they pay for a farm land or a service by using a mixture of cash and tokens.

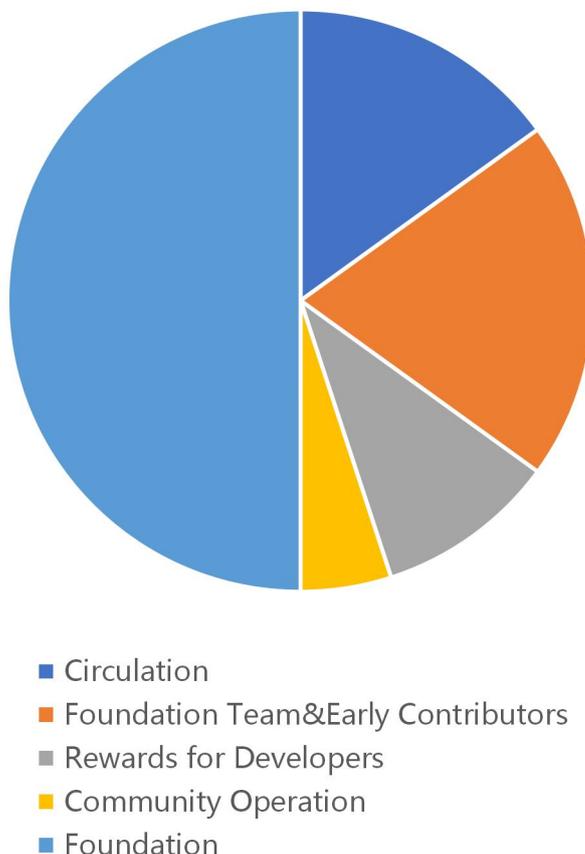

4 Token分配方案

Allocation Plan of Token

<全球资产权益数字化第一链>

The total circulation of CNCC is 1 billion, and the total amount is constant. The specific allocation plan is as follows:

- 1. Foundation:** 50%, foundation operation, used for the establishment and operation of CNC-Chain foundation.
- 2. Foundation team & early contributors:** 20%, used for the cost of CNC-Chain foundation team, operation team and the later cost for talents recruitment as well as rewards for the early contributors involved in the early establishment of CNCC ecology.
The rule of lock-in: from the day when the Token is on the exchange, it costs three years to be released, 30% for the 1st year;30% for the 2nd year;40% for the 3rd year.
- 3. Rewards for developers:** 10%, used for the rewards given to the developers involved in the products design and R&D for CNC-Chain.

The rule of lock-in: from the day when the Token is on the exchange, it costs three years to be released, 30% for the 1st year;30% for the 2nd year;40% for the 3rd year.

- 4. Community operation:** 5%, used for encouraging users in CNC-Chain community as candies.

The rule of lock-in: from the day when the Token is on the exchange, it costs three years to be released, 30% for the 1st year;30% for the 2nd year;40% for the 3rd year.

- 5. Circulation:15%**, used for cornerstone investment and private placement, 20% of which will be allocated to the stage of cornerstone investment; 80% for private placement.

The commitment to lock-in: from the day when the Token is on the exchange, 10% of it will be issued in the first time, others to be released in nine months, namely, 10% each month.

CNCC currently accepts currency for exchange: **USDT**

4.1 The Structure of CNCC's Ecology System

A portion of the funds raised through the ICO will be allocated to optimize the platform, complete the source code, and reward developers for writing code that will promote uniform adoption by all stakeholders in the blockchain to realize full compatibility. Through the alliance chain of digital asset rights and interests, relevant industrial parties can obtain the equity investment and swap by CNCC.

4.2 Fund Investment Strategy and Portfolio

As an important part of the CNC-Chain ecosystem, the foundation will hold a certain number of Token to invest in related enterprises and continuously acquire equity assets, with the purpose of promoting the use of CNC-Chain technology in the digitalization of asset rights and interests, and associating Token with the economy of asset rights and interests.

4.3 Special Claim

We abide by the laws and regulations of various countries and forbid the participation of Chinese citizens, American citizens and other citizens from the countries where forbid transactions related with CNC-Chain during the global public fund raising period. If there is any violation, CNC-Chain will not bear any responsibility.

5 Token贡献方案

Contribution Scheme of Token

<全球资产权益数字化第一链>

5.1 The Contribution Stage of Cornerstone Investment & Private Placement

Many industry leaders and investors made significant contributions during the early development of the CNC-Chain project. In order to appreciate them for their input and to maintain a long-term partnership with them, the following are the contribution stage and the corresponding amount to be raised:’

The first stage is the cornerstone period, with 30,000,000 CNCC to be raised, and the exchange period has ended;

The second stage is 1st phase of the private placement, in which approximately 16,000,000 USDT or equivalent digital assets shall be raised and about 80,000,000 CNCC shall be exchanged.

The third stage is the 2nd phase of private placement, in which approximately 10,000,000 USDT or equivalent digital assets shall be raised and about 40,000,000 CNCC shall be exchanged.

5.2 The Platform for Private Placement

The public purchase platform will include Singapore's CNC-Chain official website and other OTC platforms.

5.3 The Price of Private Placement

The periodic price to investors is shown in the figure below: as the private placement progresses, the discount to investors will decrease.

A total of 1 billion CNCC tokens were issued.

Contribution Scheme of Token	Stage		
	Cornerstone	Phase I of PE	Phase II of PE
The percentage of total issuance	3%	8%	4%
The amount of Token	30 million	80 million	40 million
The amount of CNCC exchanged by 1 USDT	/	5	4
The rule of lock-in and release	From the day when the Token is on the exchange, 10% of it will be issued in the first time, others to be released in nine months, namely, 10% each month.		

5.4 The Legal Issues of Purchasing CNCC

Most tokens are digital assets that are provided directly by the team. In the private placement stage, investors, excluded from China and the United States (including the United States and the District of Columbia), Puerto Rico, U.S. Virgin Islands or any other territory of the United States, has the qualification to participate in, because it is regarded as the angel investment on the project, which is not regulated by the "securities law", and are not subject to the jurisdiction of the Chinese legal regulations. Besides the private placement stage, citizens from China and the U.S are prohibited from participating through its official website in other stages as well.

Within the legal framework, the CNC-Chain team takes a highly cautious attitude towards legal risks provided by Token. On this basis, the CNC-Chain team may adjust the Token sales strategy to minimize legal risks necessarily throughout the process.

In private placement stage, investors must be "qualified investors". If they do not qualify for the whitelist, they will not be allowed to participate in the Token offering.

6 治理和风险控制

Governance and Risk Control

<全球资产权益数字化第一链>

6.1 Governance Structure

1. The establishment of the CNC-Chain foundation

CNC-Chain has set up a foundation in Singapore with an organization consisting of the council and the executive committees to run and manage the community and to protect and manage the funds raised for beneficiaries.

Organization structure of CNC-Chain foundation

CNC-Chain Foundation					
CNC-Chain Community	The Council of CNC-Chain				
	The Executive Committee of CNC-Chain				
	the Nomination & Remuneration committee	the Technical Review Committee	the Investment Coordination Committee	the Risk Control Committee	the Public Relations Committee

2. The council of CNC-Chain

The council of CNC-Chain will be responsible for the community convention of CNC-Chain, which will be responsible for managing and supervising the core members of the executive committee, and the council will elect digital asset holders every two years, depending on the number of assets and the duration of the asset holdings.

In the process of issuing digital assets, first of all, the core members of CNC-Chain, as well as the members of the first council, should be decided at first. Second, 100 community representatives will be elected according to the number of assets, industry attributes, working experience and working years. Finally, 10 members of the council will be elected and authorized to make decisions on behalf of the foundation. The

council will be investigated during its term of office, and any resolution to be implemented should be approved by voting consents from at least two-thirds of the council's members.

3. The executive committee of CNC-Chain

The executive committee of CNC-Chain is composed of the nomination & remuneration committee, the risk control committee, the public relations committee, the technical review committee and the investment coordination committee. Members of the committees will perform their duties to carry out practical work.

4. The community convention of CNC-Chain

The community convention of CNC-Chain shall have the highest power, consisting of digital asset holders elected from the community, whose functions are described as follows:

(1) To modify the regulation of the convention of CNC-Chain;
(2) To supervise the implementation of the regulation of CNC-Chain;
(3) To select and alter the members of the council;
(4) To revoke the inappropriate decision made by the council;
(5) To approve major and significant changes.

As the basic rule of foundation governance, CNC-Chain's *Supervision Regulation* can be inquired from official website publicly. CNC-Chain's *Supervision Regulation* will be carried out after the project keeps running for six months on trial. The first edition will be made by foundation and the community convention will be held in 2 years. Conventions after that will be held according to the will of the members in the council or at least the will of a fifth of digital asset holders.

6.2 Risk Control

By adopting consensus protocols, smart contracts, digital signatures, encrypted wallets and other security measures, CNC-Chain ensures the security of end-user accounts and funds and provides the highest level of asset protection technology, enabling data applications and transactions to be integrated into the blockchain network so as to build a secure network environment. In addition, a series of technical and management measures will be taken to ensure CNC-Chain's reliable and safe operation.

The council of CNC-Chain complies with laws and regulations and business ethics within its jurisdiction, providing transparent financial management; The council will invite prestigious audit associates worldwide to evaluate the foundation's financial information, and will publish the results of those reports without any reservations or interventions.

7 项目路线

Project Route

<全球资产权益数字化第一链>

The initial R&D strength of CNC-Chain is still weak. In order to complete the various systems proposed by us as soon as possible and optimize the CNC-Chain’s platform rapidly and iteratively, the CNC-Chain R&D team will adopt a periodic R&D method, stage by stage and step by step.

Currently, the team's main R&D efforts will focus on the development of the basic facilities of CNC-Chain. With the development and enhancement of the community ecological power, the CNC-Chain will gradually develop itself through iterative evolution and turn to be a public Chain. In order to make the development process open and transparent, the R&D team will update the progress related to the R&D work in a weekly manner on GitHub, a platform where project’s codes are hosted on it, so that the community members can obtain the information timely.

CNC-Chain Project Route

2018.6	2018.7	2018.10	2018.11	2019.3
To prepare the CNC-Chain project; the foundation team is formed up	Fund raising began; DAPP’s R&D began	The main chain’s R&D will be started	DAPP 1.0 will be online; DAPP 2.0’s R&D will be started; CNCC will be on Zhongmo Exchange	CNC-Chain’s main network will be online
